

Company Profile

BMT Fleet Technology (BMT) is an innovative leader in providing through-life engineering support from concept development through design, construction, operations, life extension/upgrade and disposal. The company employs its technological expertise and practical experience to provide services to clients in the Marine, Defence, Energy & Environment, Civil & Industrial Infrastructure, and Transport industry sectors.

The company's hallmark of engineering excellence involves the provision of leading edge structural and mechanical system damage assessment, materials and welding engineering, inspection and maintenance management, naval architecture and marine engineering, environmental and cold regions engineering services. Through the integration of these disciplines, the company delivers comprehensive solutions for clients' unique problems.

Marine Transport Sector

BMT offers an unparalleled scope of design, consulting and management services for naval architecture, ship acquisition, shipyard support, structural analysis, repair and maintenance, evacuation, cold regions technology, risk and safety, system consulting and auditing for the marine and offshore sector.

Defence Services

BMT provides an independent centre of excellence that can conceive, design and introduce complex and capable systems. The company has capabilities that span the whole defence support spectrum, providing customers with impartial and independent technical support for their military projects based on optimized achievement of military capability.

Energy and the Environment

BMT provides practical solutions to engineering problems using advanced technical knowledge and high quality applied research, experimentation, design and engineering analysis. Our innovative team supports the oil and gas pipeline industry with leading edge engineering services. BMT has the knowledge to help you navigate today's environmentally sensitive regulatory environment by identifying potential environmental impact issues which can then be designed out or mitigated to ease the government approval process.

Civil and Industrial Infrastructure

BMT specializes in the design and development of a wide range of services in the civil, structural, and municipal engineering disciplines. BMT has capabilities that range from welding engineering, failure analysis, fitness-for-purpose assessment, mechanical testing, cold regions and environmental engineering providing customers with impartial and independent technical support for their civil engineering projects.

Transport Sector

BMT has been very successful in using practical experience and lateral thinking to provide non formulaic solutions that deliver long-term benefit by supporting our clients from concept through to implementation. We operate across a range of industries and, where applicable, can apply proven best practices to the needs of our transport clients.
